

Pan Acoustics expands its portfolio with subwoofer P SW-112

The audio manufacturer Pan Acoustics expands its portfolio with P SW-112 – a compact, multifunctional subwoofer. A specially developed 12" HQ woofer chassis drives the impressively low tuned speaker, based on a ported design.

In terms of power and resolution the compact subwoofer, made of high-quality birch plywood, sets standards. Up to 3600 watts (peak) power and 131 dB (peak) output level offer sufficient reserves for the most diverse applications.

Ergonomic handles as well as a M20 pole mount for attaching a distance rod suggest, that the almost handy subwoofer is not only suitable for installations, but also for mobile events.

Depending on the requirements, the subwoofer is available in one passive and three active versions: The passive version of the P SW-112 is equipped with two robust NL4 connectors. Processing presets for power amplifiers of most common manufacturers are available and allow sound optimization, regardless of the selection of the power amplifier brand.

The new 12" subwoofer P SW-112 comes handy, deep in sound and rich in variety.

The active variant with the model name P SW-112 | SP offers a total of three input options from analog and AES/EBU using the Pan Net interface or via redundant Dante networks. Due to the headroom of the integrated amplifier, there is the option to connect an additional passive subwoofer via NL4 connection.

The free system software connects to the subwoofer via a Pan Net interface with USB or directly via Dante network and allows the control of the internal DSP. All active components are ideally matched with the speaker and additionally integrate a 5-band parametric equalizer, gain and delay (up to 370 ms).

The P SW-112 is available in the standard colors black (RAL 9005) and white (RAL 9010) with structured texture, and can be supplied in any color upon customer request.

Pan Acoustics attaches great importance to sustainability and long term maintenance of value. The owner-managed company produces „Made in Germany“ and uses only high-quality materials for the assembly of its durable products to ensure excellent and natural audio reproduction. Pan Acoustics backs up this quality promise with a 10-year warranty.
