

Pan EVAC P 02 receives EN 54-24 certification by VdS

With the Pan EVAC P 02-EN54, the Pan EVAC series has been extended by a new loudspeaker model. With its 2x3.5 inch drivers, it now offers the smallest entry in the Pan EVAC family and is ideal for use on train platforms, in corridors and wherever small distributed loudspeakers are needed. The certificate was awarded by the renowned German VdS Institute, which certifies the best quality and manufacturing standards.

Similar to its bigger brothers P 04-EN54 and P 08-EN54, the speakers uncompromisingly use high-quality 3.5-inch drivers for an exceptional natural audio reproduction, suitable not only for announcements but also for high-quality background music. Unlike cheap speakers, Pan Acoustics uses only 100V toroidal transformers, which guarantee the best low-frequency reproduction on 100V lines without saturation effects.

Pan EVAC P 02-EN54: available in any color and ideal for use where small loudspeakers certified according to EN 54-24 are required.

Great emphasis was also placed on mechanical quality. The speakers are made of powder-coated aluminum profiles with stainless steel front grilles. This makes them weather-resistant and, due to the ball impact resistance, enables permanent installation in sports and soccer arenas. The speakers are certified to EN 54-24 Type B for outdoor use and are IP54 rated to ensure long life with great return on investment. Pan EVAC P 02-EN54 is available immediately.
