Perfect fit: VESA mount for speakers from Pan Acoustics

In media playback, a sharp picture also wants to be accompanied by clear sound. In professional use, however, the speakers integrated into the screen are usually not sufficient for the demands and the display is supplemented with additional speakers.

For this purpose, Pan Acoustics has extended its Pan Accessories series with the „VESA Speaker Mount“. The mount allows an uncomplicated and quick installation of Pan Acoustics line source speakers on all common displays. The „VESA Speaker Mount“ is mounted as an adapter between the display and the existing VESA mount. The smaller model „VSM“ is suitable for use on displays from 55 to 65 inches; the larger variant „VSM XL“ is used on displays with a screen diagonal of 75 to 98 inches.

Elegant, accurate to the millimeter, flexible and easy to mount: the VESA mount for speakers from Pan Acoustics.

The mount consists of just a few parts and is designed so that the speakers can be mounted and aligned precisely with the frame of the display and flush-mount with the display front. For the perfect fit, Pan Acoustics offers custom manufacturing of the speakers: millimeter-precise in length and exactly matched to the color tone of the display frame - as if from a single mold.

Pan Acoustics makes every audiovisual presentation a pleasure. Be it in an exclusive home cinema, a meeting in a conference room or in the infotainment of a museum.
